

linear algebra ii

math 365
3 credits
bu 106
mwf - 12:00 pm

scott m. lewis
hertz 225
phone: 963-1803
fax: 963-3226
hours:
m,w,f-9:00am
else, by appointment,
gleefully accepted

links:

 [math 260 topical outline](#) (all the bits that are fit to print)

 [georg cantor](#)

 [euclid's elements](#) (from clark university, worcester, massachusetts)

 [general history of mathematics](#) (from trinity college, dublin)

 [aristotelean logic](#)

 [chronology of mathematicians](#) (also from clark)

of course, there are many other resources out there. find some of them and report back to me.

prerequisites: MATH 265 or permission.

text:

(1997). axler,sheldon. linear algebra done right, second edition. (san francisco: springer.)

description:

this course is part of a group of transitional courses for math majors. these courses are meant to provide instruction on how to write and understand proofs, while covering similar topics as math 265.

it is also recommended for those students in the sciences and engineering who want to have a more theoretical understanding of linear algebra. after completing math 365, students should be prepared to take proof-based courses at the 400 level.

this course should be considered "writing-intensive"

course content will include some, or most of the following:

definition, examples and basic facts in vector spaces
linear systems
linear combination, linear independence, basis and dimension,
coordinates
inner product spaces
matrix algebra and inverse
linear transformation, kernel, change of basis, isomorphism
determinants
eigenvalues and eigenvectors

there are some links in the left sidebar of this page. take the time to explore what some people in other universities are interested in. there are other possibly useful links back at my [home page](#).

this quarter we will cover the following in axler:

- o ch. 1 (vector spaces)
- o ch. 2 (finite dimensional vector spaces)
- o ch. 3 (linear maps)
- o ch. 4 (polynomials (selections))
- o ch. 5 (eigenvalues and eigenvectors (selections))

check out the [class calendar](#) and the [math 260 topical outline](#).

evaluation:

the bulk of your grade (95%) will be determined by

(TBA).

the remaining 5% of your grade will be based on the homework assignments i collect, the several, unannounced but straight-forward quizzes we have, and things like class participation.

if you have any questions or comments, feel free to come by my office or e-mail me at the address below.

student learner outcomes

the most important things you learn in school are not going to be measurable, sorry. in fact, the absolute best service a list of 'student learner outcomes' could possibly provide is as a random sample of behavioral objectives. that said, at the end of this course, you will have a reasonable facility (as measured by the evaluation procedures described above) in manipulating sets, creating truth tables, identifying logical forms, and constructing sound mathematical proofs with a variety of techniques all in the context of teh definitions and fundamental theoretical structure of linear algebra. By the way, when we use the phrase 'elementary set theory' to describe this course, the word 'elementary' should not be confused with 'simple.'

note

students with disabilities who wish to set up academic adjustments in this class should give me a copy of their *confirmation of eligibility for academic adjustments* from the disability support services office so that we can meet in order to discuss how the approved adjustments will be implemented in this class. students with disabilities without this form should contact the disability support services office, bouillon 205 or dssrecept@cwu.edu or 963-2171 as soon as possible.

no, no, no!

no late assignments, no early tests, no late tests, no make-up tests (including finals ... be there).

| post no bills |

winter 2009.
there's no place like home.
