

Math 311 Winter 2012

Statistical Concepts and Methods

Instructor: Dr. Dominic Klyve

Office: Bouillon 123

E-mail: klyved@cwu.edu

Webpage: <http://www.cwu.edu/~klyved>

Office Hours: Monday 10:00-11:00, Tuesday 1:00-2:30, Thursday 1:00-2:30.

Course Description

This course will introduce you to the basic ideas of the science and art of statistics. Statistics is a large and important field, and the people who apply it well have become rich, saved lives, and quite literally changed the world. This course aims especially to make you a more intelligent consumer and evaluator of statistics. The course outcomes are designed to help you *understand and apply* (not just memorize) statistical principles and concepts, and to help you think in an analytical and critical way about statistics. Nevertheless, we will spend a lot of time generating our own statistics as well. Topics include, but are not limited to: descriptive statistics, regression, inference, and analysis of two-way tables.

Goals and Objectives

Our primary objective is to practice and become proficient in the following:

- 1) The analysis and interpretation of data (ANALYSIS)
- 2) The choice and application of appropriate methods (INFERENCE)
- 3) The communication of the results to others (EVALUATION)

Required Text

Moore, D.S., McCabe, G.P., and Craig, B.A., *Introduction to the Practice of Statistics, 6th edition*, W.H. Freeman and Company.

Calculator

You will need a calculator that performs at least the standard scientific functions.

Teaching Philosophy and Course Expectations

New learning occurs most effectively when it is based on what students *already know*, when students actually '*do*' real science, and when they become aware of *how* they learn, not just *what* they learn (Donovan, 2005). Learning is a deliberate and conscious decision, one that involves breaking established neural patterns and creating new ones. To best facilitate growth, my expectations are for you to:

- Think critically. This course will require critical thinking. People that analyze, infer, evaluate, and make reasoned judgments do better in college, make better daily decisions, and have greater professional success. Developing critical thinking should be a key goal of every student.
- Apply yourself. This course will take a lot of time and energy. If you have high learning expectations, that is what you will achieve. Success in this course will require significant effort (several hours of study time for each hour of class). Depending on your mathematical background, you may need to spend more or less study time. Attend class regularly, be on time, and budget your time to accommodate the workload.
- Ask questions. Statistics is fascinating, but it can be confusing, too. Ask questions. If you aren't clear on something, there are likely others who are equally unclear on the topic.

- Be informed. People sometimes use information to manipulate others' behaviors and decision-making in ways not always to your benefit. If you don't understand the mathematical basis of a claim about data, you can't make an informed decision about it. Be curious; try and find out all you can about a topic before you make a decision that may profoundly affect your life.
- Be respectful. We will discuss some sensitive and controversial issues in this course. Everyone will respect others' right to express their opinions even if you disagree. Respectful discourse is a minimal expectation of every student.
- Communicate clearly. Effective written and oral communication indicates an intelligent mind. Clarity, proper format, spelling, and grammar are expected of every student.
- Use common sense. Cheating on assignments or exams, plagiarizing others' work, and turning in late assignments is unacceptable. Any infractions may result in a zero for the assignment, a failing course grade, and the possibility of disciplinary action by the university. I won't accept *anything* late unless you have written documentation from an appropriate source or have made prior arrangements with me. If you have a problem that prohibits you from turning something in on time, let me know ahead of time. In all instances, communicate with me so we can prevent problems.

Learning Performance Evaluation

People learn differently; some people excel at taking lecture exams while others do better with written projects or group work. To accommodate different learning styles, your performance in this course will be evaluated using: 1) individual exam scores, 2) laboratory performance, 3) group quizzes, 4) case studies, 5) a written project, and 6) peer evaluation, as follows:

<u>Assessment Method</u>	<u>Value</u>
Weekly quizzes:	10%
Labs:	20%
Mid-term exams	10% each
Final Exam	10%
Case Studies	15%
Final Project	20% (15% written, 5% oral)
Peer Evaluation	5%

Final grades will be assigned according to the following scale:

	A 100-93%	A- 92.9-90%
B+ 89.9-87%	B 86.9-83%	B- 82.9-80%
C+ 79.9-77%	C 76.9-73%	C- 72.9-70%
D+ 69.9-67%	D 66.9-63%	D- 62.9-60%
F 59.9% and below		

Explanation of Assignments and Activities

Quizzes: Quizzes will be given every Tuesday at the beginning of class, with the exception of exam weeks. Quizzes will cover the material for the previous week, Monday through Friday. No make-up quizzes will be given, but to allow for unavoidable absences the lowest quiz score will be dropped. If you must miss a Tuesday class due to a school activity (e.g., a class field trip or university-sponsored athletic event), that quiz can be excused if this is requested *in advance* and you supply me with a note from the instructor or advisor. Quizzes will be excused only for school-related activities.

All quizzes will be taken in groups of (about) three people. Quiz group assignments will be randomly chosen just before the quiz.

Labs: Labs are opportunities to learn and practice the mechanics of performing statistics on a computer. The lab each Friday will include questions to be answered, including relevant statistical analyses. Your answers to these questions (which should include both statistical output and written English sentences) should be handed during next Wednesday's class. **NO credit will be given for late work.** Electronic submissions will not be accepted. Your solutions should be typed, written in complete sentences, and follow the general guidelines for written work given above.

Exams: Exams will consist of a combination of multiple choice, short answer, and essay questions. Any changes to the tentative exam dates will be announced ahead of time in class. Make-up exams must be arranged ahead of time unless you can document an unexpected circumstance beyond your control that prevented you from taking the exam. For instance, in the case of illness, a doctor's note will be required. All make-up exams must be requested as early as possible. Exams requested more than 24 hours after the scheduled exam will be given only in extreme extenuating circumstances (e.g. hospitalization, jail, etc.)

The final exam is cumulative, and must be taken at the designated time.

Case Studies: Three times during the quarter, you will work with your group on a significant, open-ended case study in which you will choose an aspect of public health to study, and perform careful analysis, inference, and evaluation of the results. Each case study will culminate in a written report. Additionally, after one of your case studies, your group will give a 5-10 minute oral report on your work to the class.

Peer Evaluation: Collaborative groups are where some of the best science is done. Most of you have probably been in situations where someone takes more credit than they deserve while others get less credit for their contributions. Ultimately the most qualified people to evaluate group contributions are others within the group. Each student will peer evaluate group member contributions at the end of the course, which will be calculated into each student's final course grade. Failure to complete a peer evaluation will result in a zero score for that individual.

Final Project: Your final project will be a significant, culminating, experience in this course. The final project will consist of a series of statistical analyses of a large data set (the Kittitas County Community Food Survey), with the goal of understanding the health of Kittitas County, and how it might be improved. Your group's final written report will be submitted to the Kittitas County Health Department. Additionally, you will give an oral report summarizing your findings to the Food Access Coalition.

Homework: Homework will be assigned at the end of most classes. It is expected that you will do the homework problems. To aid the battle against procrastination, questions about the previous day's homework, and only the previous day's homework, will be taken at the beginning of class each day. Of course, I will happily take any and all homework questions during office hours. Keeping up with the homework is one of the best things you can do to help yourself succeed in this course!

General Course Policies

Daily attendance is expected and considered necessary for success. If you need to miss class for some reason, you should try to contact your professor in advance. It is your responsibility to find out what was covered on days you were absent, either from a classmate or from your professor. You are responsible for any announcements made in class regarding homework, exams, and quizzes, whether or not you are present. Please bring your calculator to each class meeting.

Please note that Fridays are "lab days", on which class will meet in the computer lab. You will have activities to do on these days using statistical software and write-ups based on these to hand in; see below.

All work handed in for the course must be written neatly, legibly, clearly, using correct mathematical notation, and with sufficient explanation. A good rule of thumb is to write your solution so that a classmate who knows roughly what's going on in the course but doesn't know how to do this particular problem can understand your solution. As a side benefit, this makes it much more likely that you will be able to understand your solution when you go back to study for exams or the final! The bottom line: for any written work handed in for the course, including lab write-ups, exams, and quizzes, **you must show your work.**

Part of this class involves the writing of weekly lab reports on your computer-based statistics work. These must always represent your own work. The taking of work from other sources, including your classmates, is plagiarism, and is strictly prohibited by the university's conduct code. If you commit plagiarism on a lab assignment once, you will receive a "0" for that assignment, and a note will be sent to the department chair. If you commit plagiarism a second time, you will automatically fail the course.

Students with disabilities who wish to set up academic adjustments in this class should give me a copy of their "Confirmation of Eligibility for Academic Adjustments" from the Center for Disability Services as soon as possible so we can discuss how the approved adjustments will be implemented in class. Students without this form should contact the Center for Disability Services, Bouillon 205 or dssrecept@cwu.edu or 963-2171.
