**Course Overview:** At CWU, Finite math is one of the courses that can be selected to satisfy the reasoning requirement for graduation and it is commonly taken as a prerequisite for statistics. It is real-world applicable and serves to prepare students for research and statistical courses at a later date.

It has been said that Finite math is for the information age. Finite math courses originated in the 1950's with the common orientation of studying finite, or discrete (between 0 & 1) numbers, problems as opposed to the continuous problems investigated in Calculus. Finite Math courses typically include logic, set theory, counting principles, statistics and decision making

**Textbook:**

*Finite Mathematics, introductory probability & statistics* (Owen & Cutlip) any edition

**Topics covered:**

1. Counting and probabilities
  - a. Sorting and counting of data, samples, or populations
  - b. Defining sample spaces and events
  - c. Set notation, the additive law, and the complement
  - d. Conditional probability
  - e. Bayes' theorem
  - f. Using the complement (reliability of systems).
2. Variables and probability distributions
  - a. Describing random variables
  - b. Measuring dispersion
  - c. Binomial distribution
  - d. Normal distribution
3. Introduction to Statistics
  - a. Graphical methods
  - b. Measures of Central Tendency
  - c. Measures of dispersion
  - d. Confidence intervals
4. Using statistical tables
  - a. Binomial probability distributions
  - b. Standard normal distribution table

CWU posted grade scale will be used-- I typically do not round grades

Student outcomes will include comprehension of topics as demonstrated by completion of assigned homework, quizzes, and tests. In addition, application of topics related to probability and statistics must be demonstrated by successful completion of projects.

**Evaluation and Assessment:** homework, oral quizzes, tests, and project grades will predominantly be used to evaluate student learning and progress. Homework is assigned and submitted approximately every two weeks for a grade (**completion and effort**) and worksheets are frequently completed as part of the “lecture” (not submitted or graded). Homework should be scanned and uploaded into Canvas.

Note-- homework should be scanned and uploaded to Canvas. When you submit it, **please do so in a single document**. Also, while most of the homework problems are available in the solutions manual, I encourage you to not use this resource until after you attempt the homework.

The final is difficult and a number of students drop their grade by one letter grade.

### **Necessities**

1. Participation- I am encouraging all students to complete the worksheets prior to watching the recording where I do them. A reminder is always in order that math is not a “spectator sport”.
2. PLEASE, DO NOT ask me for an exception AFTER THE FACT. I will work to accommodate all needs and help you to be successful, but it is unprofessional to request an exception after something is due.
3. My cell phone number is provided for you when you have need to speak with me. If you text, please provide your name and the class.
4. Scientific calculator (TI- 83/84 is recommended)
5. Regular communication through office “hours”, email, or phone call.
6. Provide course feedback.

**Calendar & Assignments:** Are found under the “Syllabus” tab on Canvas-- this will be frustrating for some, but most due dates are not found on the calendar. Because I take feedback from students as the course progresses, and adjust accordingly, I do not have set due dates for specific assignments.

**Canvas:** Course materials will be posted on Canvas and all resources and links will also be available.

I will do my best to meet the needs of all students. If you require specific accommodations please provide me with your CWU documentation and discuss the needs during your meeting with me at the beginning of class.
